

Application No. 10/589,313
Amendment Dated June 28, 2011
Reply to Office Action Dated April 19, 2011

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (currently amended) A display comprising:

an ophthalmic spectacle lens;

an optical imager for shaping light beams and directing them towards the eye of the wearer so as to enable information content to be viewed, said optical imager being secured to said ophthalmic spectacle lens, said ophthalmic spectacle lens having markings for referencing for the position of said imager relative to said ophthalmic spectacle lens in order to correctly secure said imager on said ophthalmic spectacle lens, wherein said markings denote the position of the far vision point and information for defining a virtual theoretical center of the eye.

2. (cancelled)

3. (cancelled).

4. (currently amended) A display according to claim [[3]] 1, wherein the information defining the virtual theoretical center of the eye are the value of the shape angle of the wearer's spectacles frame, the value of the pantoscopic angle of the spectacles frame, and a distance

corresponding to the distance between said ophthalmic spectacle lens and the center of the wearer's eye.

5. (currently amended) A display according to claim ~~[[3]]~~ 1, wherein said markings comprises the direction cosines of an information line of sight corresponding to the line passing through the virtual theoretical center of the eye and the center of the image obtained by means of the optical imager in the frame of reference relative to said ophthalmic spectacle lens.

6. (currently amended) A display comprising:
an ophthalmic spectacle lens;
an optical imager for shaping light beams and directing them towards the eye of the wearer so as to enable information content to be viewed, said optical imager being secured to said ophthalmic spectacle lens, said ophthalmic spectacle lens having markings for referencing for the position of said imager relative to said ophthalmic spectacle lens in order to correctly secure said imager on said ophthalmic spectacle lens according to claim 1, wherein said markings includes a value for the power compensation to be provided by said imager.

7. (cancelled).

8. (currently amended) An ophthalmic display comprising:
an ophthalmic spectacle lens;

Application No. 10/589,313
Amendment Dated June 28, 2011
Reply to Office Action Dated April 19, 2011

an optical imager for shaping light beams and directing them towards the eye of the wearer so as to enable information content to be viewed, said optical imager being secured to said ophthalmic spectacle lens, said ophthalmic spectacle lens having markings for referencing for the position of said imager relative to said ophthalmic spectacle lens in order to correctly secure said imager on said ophthalmic spectacle lens according to claim 1, wherein the position of said imager relative to said ophthalmic spectacle lens is referenced as a function of correction parameters of said lens.
